***Allowable Subject Matter***

1. Claims 1-5 and 7-13 are allowed.

In regards to claim 1, none of the references of record alone or in combination disclose or suggest a mirror detection signal generator, which generates a mirror detection signal from an RF signal corresponding the reflected light from a recording medium, comprises the following parts:

a first peak-hold circuit that holds the bottom level of said RF signal and having a first droop rate and outputs a bottom-hold signal;

a second peak-hold circuit that holds the top level of said RF signal and having a second droop rate and outputs a first envelope signal;

a third peak-hold circuit that holds the bottom level of said RF signal and having a third droop rate and outputs a second envelope signal;

a first reference signal generator that outputs the first reference signal generated on the basis of said bottom-hold signal and said first envelop signal;

a first comparator that compares said first reference signal with said second envelope signal and generates said mirror detection signal;

a fourth peak-hold circuit that holds the top level of said RF signal and having a fourth droop rate and outputs a top-hold signal;

a second reference signal generator that outputs the second reference signal generated on the basis of said top-hold signal and said bottom-hold signal;

and a second comparator that compares said second reference signal and said first envelope signal and generates a defect detection signal, said first droop rate being controlled by said defect detection signal.
